

CPEN 321 Software Engineering Winter 2023

M5A: Initial Code Review (Wednesday, November 1st, 3pm PT)

This is a group assignment. This assignment will not be graded. However, **you will lose all marks** for M5 if you do not submit this assignment on time.

Please remember to submit your assignment starting at 2:40 pm.

Tasks:

- 1) Open “M5_CodeReview.pdf” and follow **SETUP, Step 1** to set up Codacy on your repository.
 - You are expected to run Codacy in the main branch of your project (likely your MVP version, but you can also push a more advanced version into the main branch, if you have one available)
- 2) **Submit** a PDF file that includes the following information:
 - A link to your project GitHub repository
 - A link to your project Codacy dashboard (<https://docs.codacy.com/repositories/repository-dashboard/>)
 - A screenshot of the “Issues Breakdown” table of Codacy results on your main branch, before fixing any errors. Below is an example of how it will look.
 - Please note that for M5, you will need to submit additional information from Codacy before starting to fix the errors.
- 3) Open “M5_CodeReview.pdf” and follow **SETUP, Step 2** to set up a meeting with your peer-group for the manual code review. You can start the review process in the lab if time remain.

Issues breakdown

Good Luck!
