

CPEN 321 Software Engineering Winter 2023

Communities Submission (Friday, September 29, 9pm PT)

Through the course, project groups will be paired to form communities. A community is a pair of two teams, Team A and Team B, so that Team A will act as a client for Team B and vice versa. Clients will help drive requirements for their corresponding development teams, validate that the requirements were met, perform code review, and more.

Communities do not need to work on similar topics but need to "like" each other's topics, to serve as customers for each other.

Submission. Each group submits a pdf file named "communities.pdf", which includes the following information:

- The name of your community
- The names of both groups in the community
- Your ranking of the project ideas provided by your peer-team. For example:
 - 1st position: Car sharing system
 - 2nd position: Study-group management system

Please use the "Search for Teammates" option on Piazza to find your peer-teams. If you fail to submit the assignment on time / form your community, we will assign you to a community at random. **No changes in communities will be permitted for the rest of the term.**
